12 Volt low voltage

The transformer (transformer) is connected to the 110 V mains. This makes the system safe, even if the cable becomes damaged. This is a reassuring thought, particularly if there are children or pets in the vicinity.

5-year guarantee

In-lite focuses on achieving technical perfection in its fittings. You get a 5-year guarantee on the construction of the fitting and all LED lighting when you purchase an in-lite system.

Plug & Play: a piece of cake!

Fittings with the special Easy-lock system can literally be connected to the main low-voltage transmission cable in a jiffy (12 V), after which they can be operated from one spot or, if required, switched on and off automatically. Unroll the cable from the transformer, connect a fitting and there you are. The cable can end anywhere. Furthermore, the cables do not have to form a closed system. You can conceal the cables directly under the paving or, in the borders, by covering them with earth. Fittings with halogen or LED lighting can, moreover, be connected through one another to the same cable.

Quick to install

You do not need any technical know-how to install in-lite garden lighting. The principle is quick and simple, and easy to alter later on too. On average, it only takes about 20 minutes to install a basic system with one or more fittings. If you have a lighting plan it is simply a question of unrolling cables and connecting the fittings at the places you have chosen.
